

SERVIZI INTEGRATI DI SUPPORTO

About us

Integrated Support Services Ltd. (SIS) was founded in 2001 as an initiative of female entrepreneurship facilitated by the Lazio region. It operates in the logistics market, providing companies and institutions a set of integrated support services for “core business” issues.

The current scenario calls for companies to compete with a market-changing and increasingly globalized, there is therefore a need to focus primarily on the activities defined as “core” (central), in order to improve the competitiveness. In this context, therefore, it is useful to assign to qualified operators the “no core” to get benefits, both in terms of lower costs and higher quality of results.

Through its structure, experienced professionals and SIS partner companies provide goods, performances and deliver services related to the activities of its clients to improve their competitiveness in Italy, the European Union and abroad, with a logic of integration: from individual supplies to engineering services. SIS provides enterprises and organizations, with the usage of the latest tools, an integrated package of support services, basic logistics, maintenance and conduct installations including consultancy and design.

- An wholly owned operational structureconsulenti, professionisti e partner specializzati nei diversi settori
- consultants, professionals and partners specialized in different fields
- collaboration with qualified, experienced and referenced companies
- tools, resources and vanguard equipment
- IT applications for planning, management of databases and tools for computer and data management, preservation and dissemination of information heritage and business documentation.
- Facilities and equipment for integrated logistics.

Mission

Our mission is to provide integrated solutions and services that are able to operate effectively throughout the value chain, streamlining the processes of service delivery and making it at the same time, functional to the needs of the customer and consistent with the needs to reduce costs.

The provision of services through new modes of operation that are based on certain basic principles such as:

- management of activities through outsourcing arrangements with multi-year agreements, the identification of levels of service and measurable indices of quality, the identification of results / objectives that need be achieved, the ownership of responsibility.
- participation in a common framework for sharing, to the development of programs and services to improve the level of efficiency and the quality of integrated services.
- transparency and visibility in relation to the modes of supply and the delivery of services

SIS offers the best specialist in the areas of logistics and outsourcing and shares with you the plans for streamlining and development management services and support. Furthermore, **SIS** provides performances specified and prioritized, defined by the customer, and shares emergency situations and difficulties.

Our experiences

Experience in **SIS** is full of collaborations with companies and institutions with which we have experienced innovative solutions and developed increasingly fruitful partnership. This allows us to offer a wide range of integrated services, for customer needs, through analyzing the situation to understanding the critical points of the process and intervening in a precise and reliable way in terms of sharing risk and success.

The reliability of **SIS** provides the basis in the many experiences that have helped to develop a body of practical know-how and solutions that integrate a high flexibility and speed of service delivery. This allows to offer a highly skilled and specialized outsourcing, appropriate to the different customer needs.

SIS offers its experience, competence and ability to support management needs and handling of goods, facilities and materials from management processing to operations, from the availability of space for warehousing and storage to the packaging of goods, from the provision of shipments to their delivery, from the monitoring and reporting to the management of inventories and registries.

Our values

To provide innovative solutions and efficient services **SIS** makes a continuous cultural, economical and organizational effort based on:

Integration of services

Our customer goals are pursued through a strong customization and specialization of services in order to provide an effective and efficient outsourcing thus to create a significant competitive advantage. **SIS** performs a punctual analysis of the referenced context to understand new and innovative solutions helpful to the achievement of business goals.

Competence, Professionalism, Specialization

The aim of adaptation and improvement of internal expertise in their respective areas of activity is pursued through training, which consequently results in a strategic lever of cultural change and of support to the growth of the company as a whole. Participation in business life and the sharing of strategies are essential prerequisites for achieving the goals and represent a real added value.

Quality of results

SIS pays particular attention to deadlines and operational needs on services commissioned considering punctuality and competence essential elements in the responses to the requests of the Client. The transparency of the results obtained and adherence to agreed deadlines are essential for professional management and qualified services.

Certification Process Quality

SIS has a management system for quality certification (n.10-Q-10167-TIC) issued by TUV (first issued 21/01/2005) and in accordance with UNI EN ISO 9001:2008 for the following fields activities: “Design and implementation of integrated services to buildings and facilities and provision of integrated logistics services”.

Why choose SIS?

SIS, in providing its organizational and operational support, puts **great emphasis and focus on the customer needs**, providing integrated services according to needs and priorities defined.

SIS participates, shares and manages situations of emergency assistance to the client, ensuring operational speed in identifying solutions, reduced time to intervention and reduction of discomfort.

SIS operates according to a logic of “service” (need satisfaction) responding to various requests from the client effectively and efficiently. The advantages that SIS can offer include the provision of **specialized solutions and integrated services**, especially in the field of integrated logistics, outsourcing and general services to support the needs.

SIS guarantees an individual specialization in each service, working directly and through experienced professionals and partner companies and at the same time creating an effective “coordination”

between them.

Simplification and integration of processes is done by working with an organic and total vision, ensuring **quality of services, high competitiveness and reduced costs**.

SIS is the only element which ensures the accountability of management and operational services entrusted to it, responding to all the operational, managerial and organizational aspects set by the client, by **compressing or eliminating** the costs through involving **several suppliers**, both reducing situations of interference that often occur between the various stakeholders involved.

SIS provides a continuous adjustment to market standards and to evolutions in international regulations through the updating and development of operational arrangements and instrumentation support.

Services

Integrated Support Services, through partnerships and collaborations with other specialized companies, organizes and delivers services and integrated solutions for the following types of activities:

1. **Integrated logistics services**
2. **Distribution & Delivery**
3. **General Services**

Integrated Logistic Services

The activity of integrated logistics covers the movement of flows of goods and materials and includes the management of the entire operational chain of storage and packaging from receiving goods to the control and encryption, from the storage to the preservation, from the packaging to the labeling, from inventory management to the coordination of administrative documentation.

More in detail the activities include:

1. storage of goods, handling and warehouse inventory management
